Mobile, flexible and secure

With **Clex private mobile**, users can manage their electronic locking units (electronic door handles) as well as open and close them. In the process the smartphone communicates with the locking units via **Bluetooth® Low Energy**. Alternatively, opening and closing is also possible using RFID transponders. Clex private mobile is particularly suitable for small to medium-sized objects such as doctor's clinics, law firms, smaller offices or private homes.

The locking system can be managed easily using the **Keyng App**. The smart navigation guides the user through the app and always provides a clear overview of all the transponders and smartphones. Functions such as disassembly, battery replacement or service opening are also possible in the app. It is easily possible to manage the access to different kind of doors.

With the **Clex Key App**, the electronic locking units can be opened and closed using the smartphone. Thereby the smartphone does not have to be connected to the internet at the time of opening.

Examples from our product range:

CX2176
Mortise Lock with
electronic door handle

CX2178
Bored latch lock with
electronic door handle
