

OUR PHILOSOPHY

Uhlmann & Zacher is represented by our employees. Our team includes individuals who shape our products with their ideas and transform the market requirements into **user-friendly products** of the highest quality with high commitment. Together we develop **forward-thinking** and reliable locking system concepts.

Every employee is constantly encouraged to contribute his/her ideas to the processes and thus improve the efficiency of work. In this way, the company was able to grow unprecedentedly and even expand globally.

Our goal is to always **be one step ahead of the market**. Our ambition is to identify trends and implement the requirements of the market.

With this **corporate philosophy**, and thanks to our dedicated employees, we are at the forefront of **setting trends** in the segment and are the fastest growing supplier of electronic locking systems in Germany.

Uhlmann & Zacher develops and consults for its selected dealers at home and abroad.

OUR SYSTEMS

CLEX PRIME

The **Clex prime** locking system is an electronic locking system to secure a wide variety of object types. With the new extension **Clex prime mobile** users can now also open and close their electronic locking units via mobile devices.

CLEX PRIVATE

The system **Clex private** is particularly suitable for small to medium-sized buildings such as doctors' clinics, law firms, small offices or private homes. With **Clex private mobile**, users can manage their electronic locking units on the go, as well as open and close them.

CLEX PUBLIC

The **Clex public** locking system is an electronic locking system for integrating U&Z locking units into existing systems of partners. The products can be **exibly** configured according to the individual requirements, which makes it possible to offer customized solutions. With the new extension **Clex public mobile**, a third-party system integrated with Clex public can now be extended to allow electronic locking units to be opened and closed using a smartphone.

Electronic locking solutions

Uhlmann & Zacher has established itself in the **electronic locking systems** market since 1996. With many patented product developments and system enhancements, we have set new benchmarks in the field of **transponder-based locking systems**. Thus we are focussing on open and integrated solutions in the development phase itself.

WHO WE ARE

Martin Uhlmann
Managing Director

Dr. Marc Zacher
Managing Director

With our **wide range of products**, we offer the entire infrastructure, including the software, required to successfully install and manage an **electronic locking system**. Thus, our sales partners have access to a large assortment of products, which covers all the needs of the end customer.

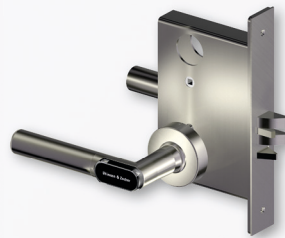

All the products are manufactured at our headquarters in Bavaria and are thus originally „Made in Germany“. But we are not just active in Germany. Our **French sales office** was setup in Emmerainville, Paris, in 2014. By working together with our **international partners**, our distribution channels include OEM partners and integrators in addition to trained dealers **worldwide**.

With numerous patented product developments and system enhancements, we are setting standards with our product groups in the field of locking systems based on transponders. Thanks to our high degree of flexibility, we can pay attention to the **special requirements and requests** of our customers. In this way, a series product has often emerged out of an individual solution developed for a particular building that has enhanced and complemented our existing range of products.

While developing our products, we ensure that they are compact and suitable for commercial use. Thus, they blend easily with the design and ambience of the building. The modular design makes the installation flexible.

Hence the **building can be expanded later at any time**. When designing our locking units and related management software, we always think about user-friendliness and intuitive operation to ensure smooth process in the building.

OUR PRODUCTS

Mortise Lock

Mortise Locks are widely used in commercial constructions, for example in industrial buildings. Mechanical units can be replaced easily and quickly by a modern electronic locking unit manufactured by Uhlmann & Zacher.

Bored Latch Lock

Cylindrical locks are commonly used in private homes and small businesses like medical practices and law firms. Here, the existing mechanical lock can even be replaced in a few simple steps.

Online Module for Clex public

The Clex online module with Bluetooth® Low Energy is the interface between the Uhlmann & Zacher products and an external system. The online module works like a „gateway“ which sends the relevant commands from the online module to the access control system and vice versa.

FIELD OF APPLICATION

Industrial and office buildings

- Flexible assignment of authorizations across multiple departments or locations
- One transponder for all doors

Apartment buildings

- Secure and convenient access solution
- Opening of house entrances and flat doors with the smartphone

Hospitals

- Work made easier in everyday hospital routine thanks to simple operation
- Door opening via smartphone possible

Schools

- Time-limited authorizations for cleaning staff or external clubs
- Prevention of rampages and violence

Universities

- Access control for different groups of people
- Use of transponders also for canteen billing or libraries
